

MMR Dropout: A Predictive Approach

Kevin Linares

Figure 1. Risk for dropping decreases with national immunization campaign exposure, varies by mothers' education level and rural/urban divide.

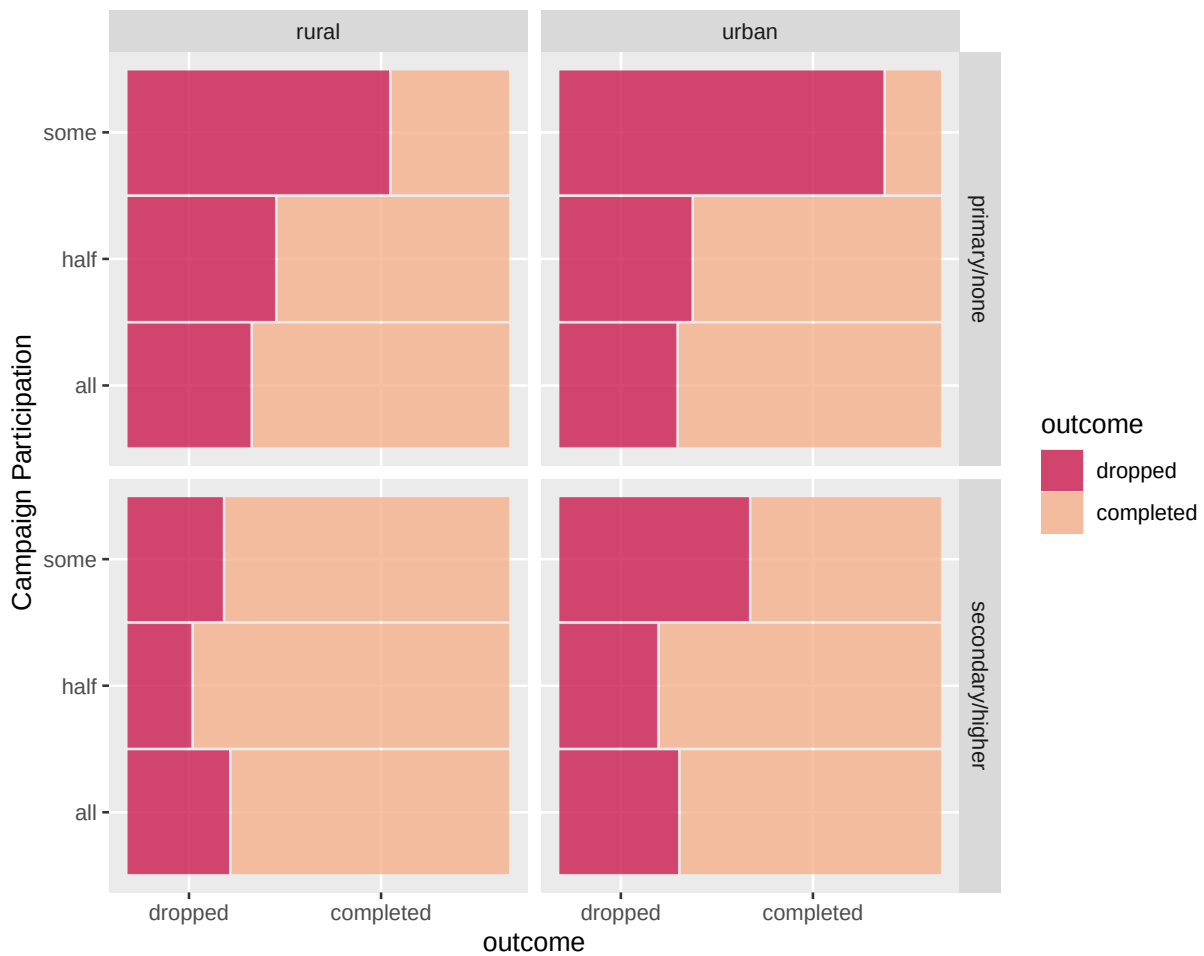

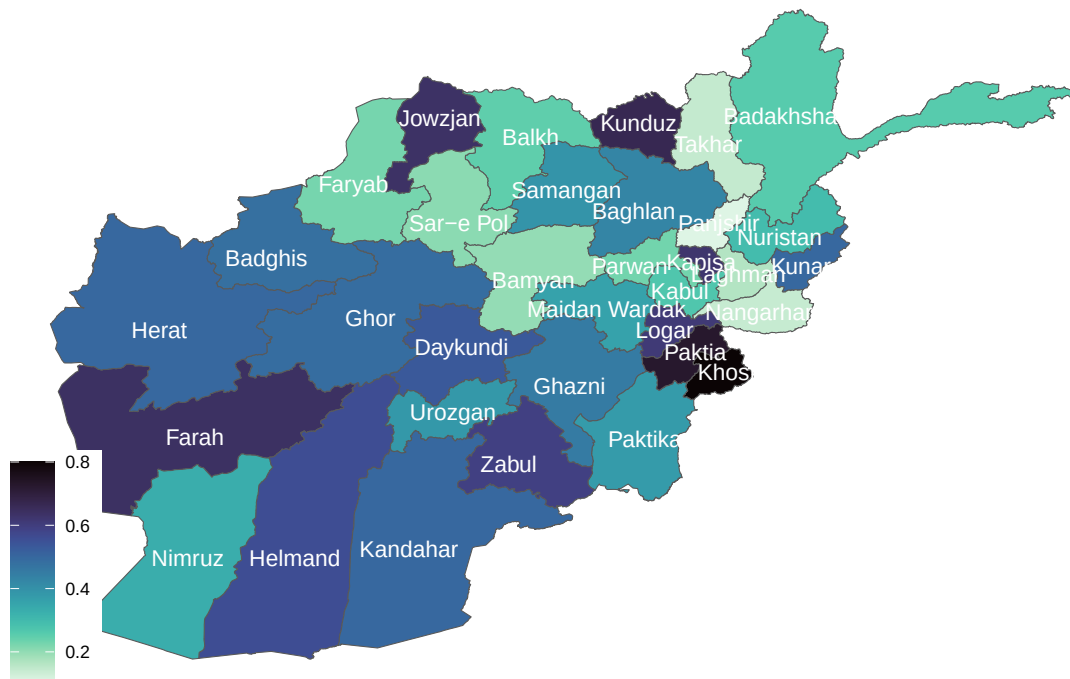

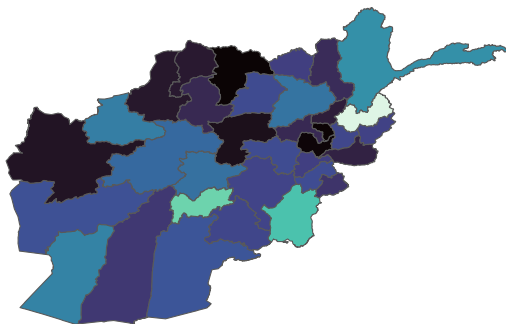

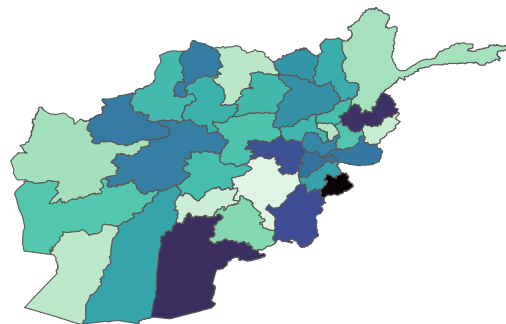

Figure 2. Proportion of Measles Vaccine Dropout in Afghanistan

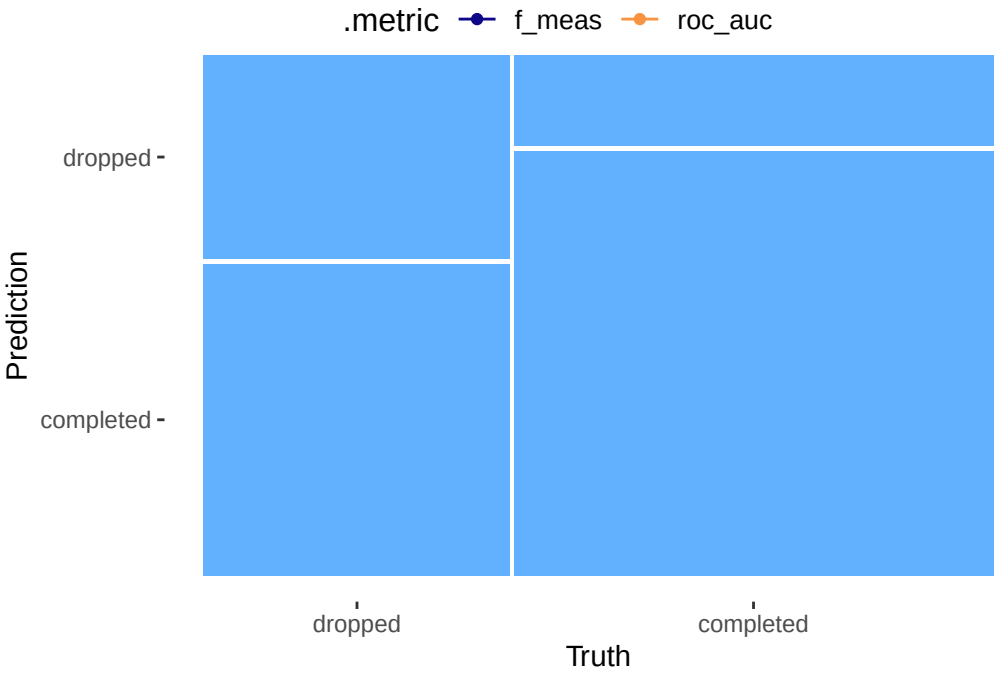

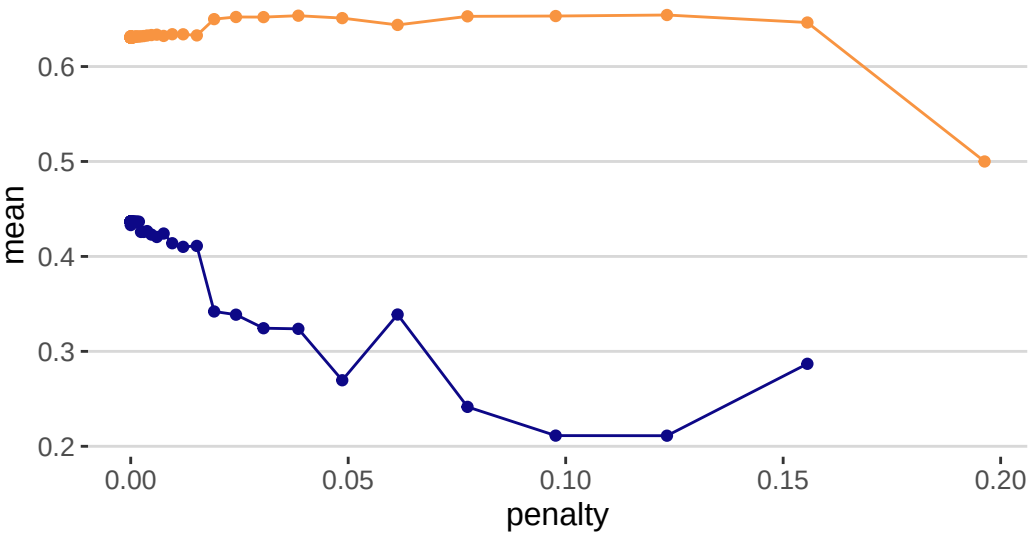

Health Institution Availability

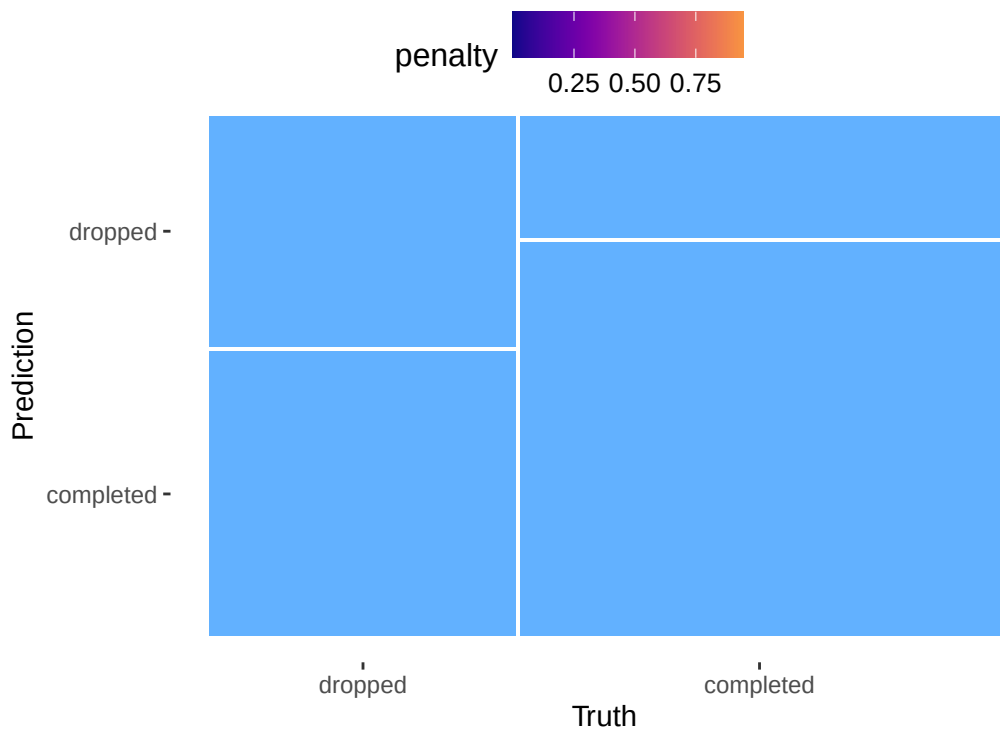

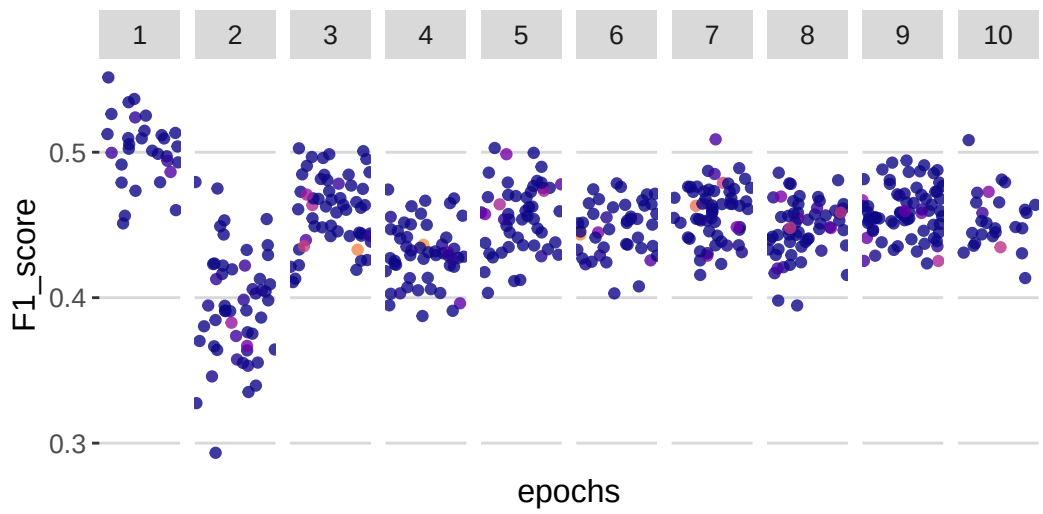

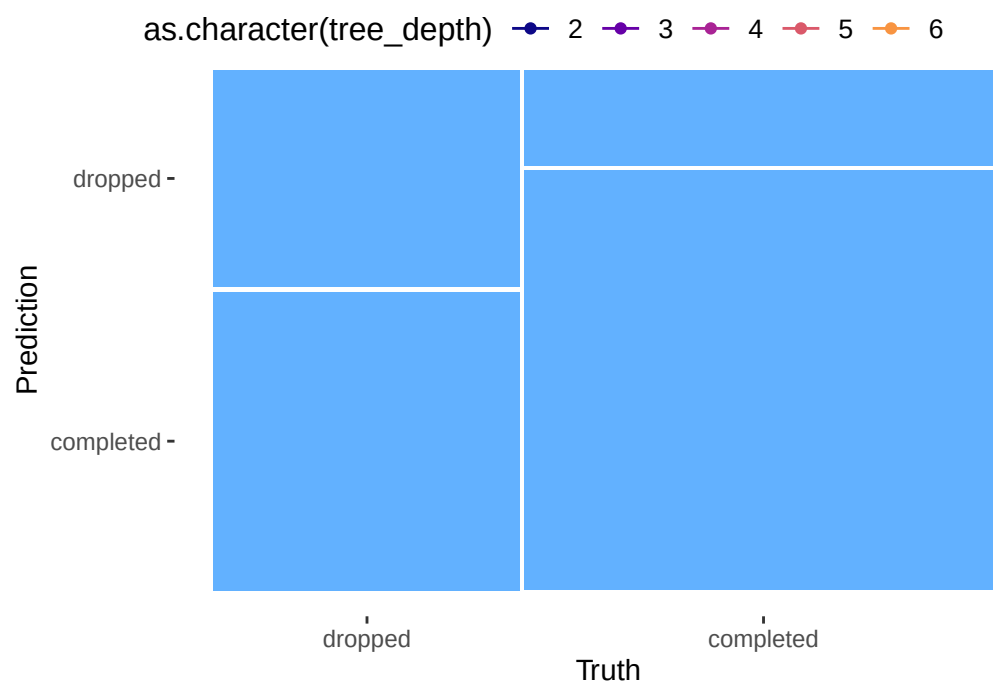

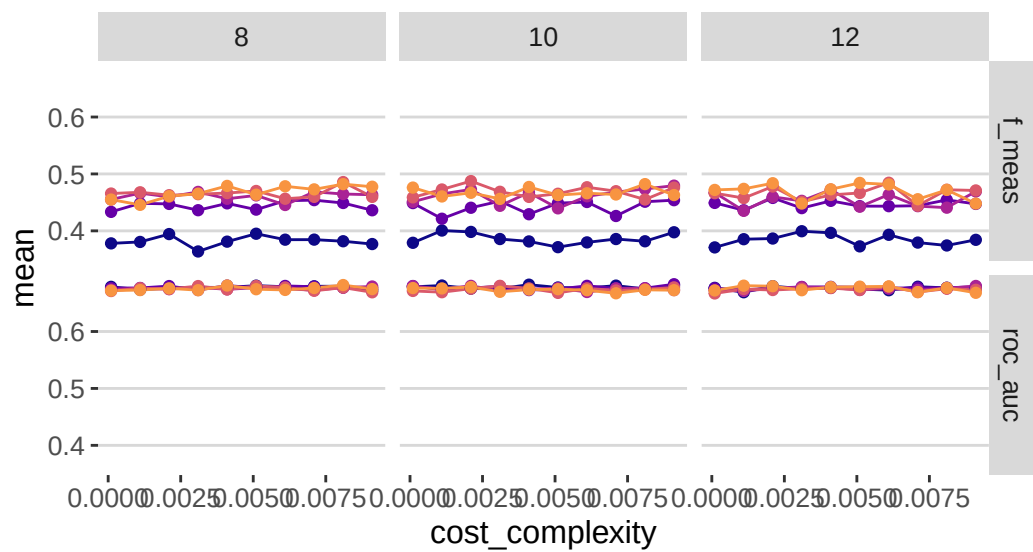

Female Literacy Rate

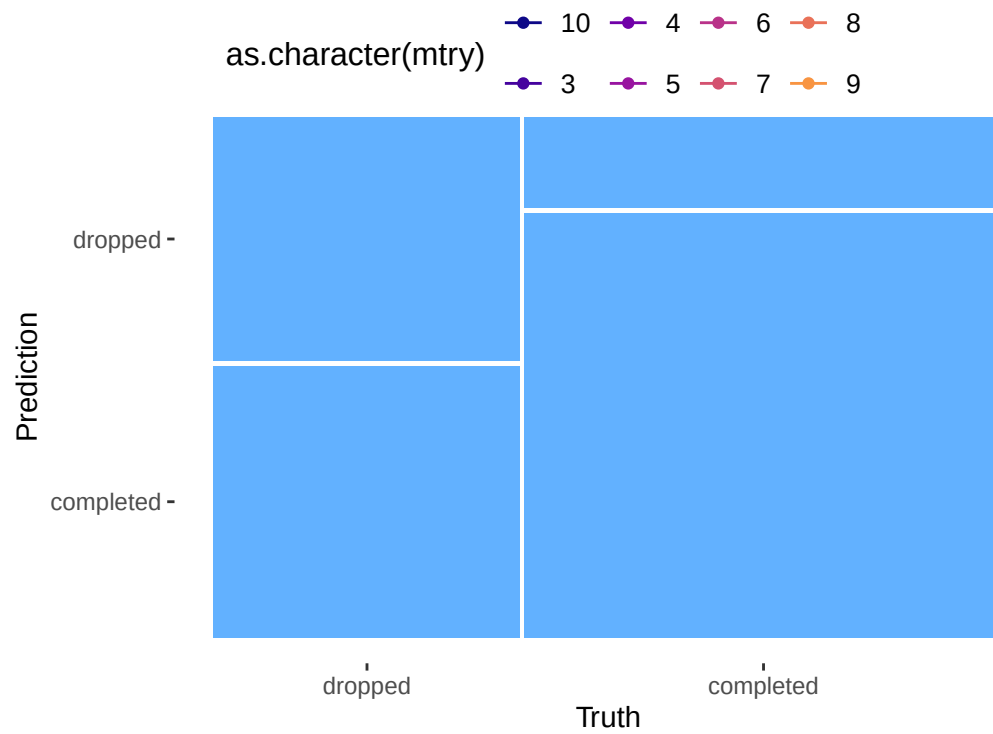

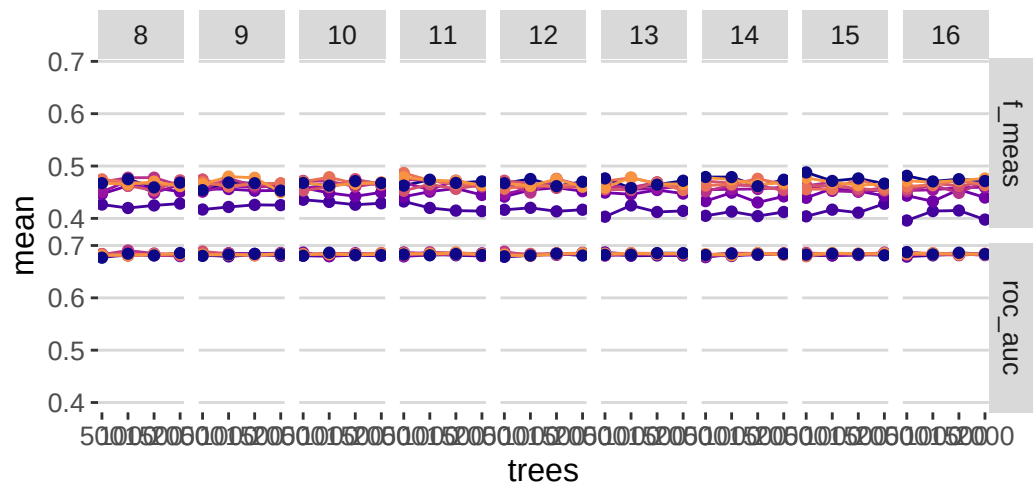

splits	outcome	n	prop
test	dropped	76	0.3897436
test	completed	119	0.6102564
train	dropped	298	0.3840206
train	completed	478	0.6159794
